

# Knurled Nut Tool Pro

## User Guide

The **Knurled Nut Tool Pro** works with panels down to 1,6mm thickness and comes with 6 replacement pins made of hardened steel and multiple hole-positions. The pins would rather break than bend.

It's is ment for usage with handles like our hand operated 4mm hex bit holder or any other 4mm bit holder from a hardware store, not for powered screw drivers etc. If you want to use machine tools, they should definitely have a very fine torque adjustment, anything else will ruin the tool and lies withinis your responsibility. It is not primarily made for that.

If you want to replace the pins, pull he old ones out with a small pliers and put the new ones in new holes and you are done.
